🧩 SUMMARY

Front-end Developer with 2 years of experience building scalable, user-friendly web applications using React, Ant Design, Tailwind CSS, and Vite. Experienced in developing reusable component libraries, dynamic form engines, and optimizing performance for large-scale applications. Proficient in JavaScript, TypeScript, HTML, and CSS, with a strong focus on clean, maintainable code and exceptional user experience.

🧠 SKILLS

Languages: TypeScript ES6+, JavaScript, HTML, CSS, XML, PHP, Java

Framework/Libs: React, AntD, MUI, Tailwind, Angular, Bootstrap, Chart.js, NestJs

Tools: GitHub, Vite, Nx, Figma, Npm

🎓 EDUCATION

VELLORE INSTITUTE OF TECHNOLOGY, B.Tech - Computer Science and Engineering
2020 – 2024

SRI CHAITANYA JUNIOR COLLEGE, Class XII
2018 – 2020

🔧 AI TOOLS

Cursor, Antigravity, Trae, GitHub Copilot, Stitch, Claude Code, OpenAI Codex, ChatGPT, and Windsurf.

🧰 WORK EXPERIENCE

Member of Technical Staff, CCTECH

04/2026 – Present | Ahmedabad, Gujarat

- Built the complete HOTO (Handover/Takeover) module end-to-end on PreHOTO, a plant-commissioning platform for Adani Green Energy — developing inspection checklists, punch-point resolution, multi-role approvals, work-area-based access control, and an Excel/CSV bulk-import pipeline (ExcelJS + Web Worker) for punch-point checklists, shipping ~70 PRs across a 20+ engineer monorepo.
- Extended the Pre-Commissioning Clearance (PCC) flow and its handover into HOTO by adding the PCC-CFT checklist section, O&M approve/resend actions, a remarks timeline, and work-area-based PCC resolution for requests with missing linked references.
- Delivered minor backend changes in NestJS to support frontend features, such as updating API responses, tweaking data fields, and fixing timestamp and notification bugs.

Software Engineer 1, Aumnee

12/2024 – 01/2026 | Bengaluru, Karnataka

- Took ownership of the end-to-end development of a Loan Origination System (LOS) for financial institutions, leading a team of 3 developers using React, Ant Design, Vite, Tailwind CSS, and RTK Query — driving an 80% increase in monthly loan disbursements for clients.
- Contributed to the development of a config-driven form engine in React, capable of dynamically generating forms from JSON configs. Added registry-driven architecture, schema-based validation (AJV), virtualized rendering, and debounced validation to efficiently handle 500+ fields.

- Spearheaded the development of a core component library with 60+ reusable UI components using compound React patterns, standardizing design and reducing delivery timelines across multiple projects.

Software Developer Intern, Aumnee

06/2024 – 12/2024 | Bengaluru, Karnataka

- Contributed to products such as Omni UI and Marvin, a co-lending platform enabling collaboration between banks and NBFCs, by developing key modules including LMS Config, LOS Config, Rules Management, Collections & Repayments, and POS Error UI.
- Built responsive and scalable front-end interfaces using React and Ant Design, while integrating libraries such as i18next and JSON Schema Viewer to enhance localization and schema visualisation capabilities.
- Improved overall code quality and maintainability by resolving linting issues, optimizing component structure, and following front-end best practices for performance and scalability.
